Note from the author:

thirty years ago this best-selling text defined the conceptual approach to introductory physics from the course-defining author Paul Hewitt. The ninth edition media update shows how a compelling text and innovative media can be integrated to bring physics to life for non-science majors. Hewitt's text engages students with analogies and imagery from real-world situations to build a strong conceptual understanding of physical principles ranging from classical mechanics to modern physics. With this strong foundation, students are better equipped to understand the equations and formulas of physics and motivated to explore the thought-provoking exercises and fun projects in each chapter. Icons in the text direct students to the Physics Place website, which now features five new interactive and animated tutorials that help students visualize difficult topics as well as video demonstrations and hundreds of problems and activities to help students review the material. In addition to a practicing physics workbook, each new copy of the media update also includes an electronic textbook CD-ROM, perfect for students who need to study on the go. A media grid at the front of the text shows how the media complements the text, giving students an easy-to-follow guide on how to use animated explanations and interactive exercises to consolidate and test their understanding.
